

Civik Domestic Spiral Staircase

The Civik spiral is our most economically priced model. The standard kit will reach a floor height of 3060mm and includes: 12 pressed steel treads, a large triangular top landing and balustrade and handrail for the entire staircase.

The staircase may be assembled in a clockwise or anti-clockwise rotation. Riser bars may be purchased to reduce the gap between the treads, and landing balustrade kits are available in 1200mm lengths.
